

## ENVIRONMENTAL POLICY

Simec recognizes the crucial importance of preserving the environment and is firmly committed to conducting its business in a sustainable and responsible manner. Our environmental policy is guided by the following principles:

**Legal Compliance:** we are committed to complying with all applicable environmental laws, regulations and standards by systematically monitoring regulatory updates.

**Energy Efficiency:** we continuously seek to improve our energy efficiency. We adopt technologies and processes that reduce energy consumption and optimize the use of resource to reduce environmental impact.

**Natural Resource Management:** we are committed to using natural resources responsibly. We encourage the selection of sustainable materials and aim to reduce waste through recyclability and efficient management of raw materials.

**Water:** we adopt process and plant solutions to reduce water consumption as much as possible.

**Hazardous substances:** we constantly seek solutions to reduce the use of hazardous substances and take all necessary measures to prevent and respond to emergencies related to the use of hazardous substances.

**Circular economy:** our circular thinking starts from a long way back: in engineering our products, we think about high-quality raw materials to ensure longer service life and structures that can support more refurbishments. A short, controlled supply chain and tailor-made approach allow us to reduce waste in production.

We develop solutions to extend the life cycle of our rollers, from cleaning systems to periodic check-ups, we ride the wave of the sharing economy by offering second-hand guaranteed rollers, focusing on use rather than possession.

**Waste Minimization:** we strive to minimize waste generation by promoting recycling practices and recycling materials whenever possible. We implement waste start-up and disposal programs that meet environmental standards.

**Pollution Prevention:** we take preventive measures to avoid air, water and soil pollution. We invest in technologies and practices that reduce emissions and constantly monitor the environmental impact of our activities.

**Involvement and Training:** we actively involve our employees in promoting environmental sustainability. We provide regular training on procedures for handling nonconformities and environmental emergencies and operational control of environmental aspects, and encourage innovation and personal initiative to reduce environmental impact.

**Promotion of our sustainability values in the supply chain:** we share our environmental values with suppliers in order to aim to create a sustainable supply chain, spurring partners to commit to reducing environmental impact.

**Continuous Monitoring and Improvement:** we implement systems to monitor and measure our environmental performance through key indicators. We continually seek opportunities for improvement to reduce our impacts.

Simec strives to be an example of environmental excellence, contributing to the preservation of our planet for future generations.
